What is the Auto Mist system?

Auto Mist is an automatic insect control system that is easily installed in areas where insects are a nuisance.

Used by home owners in their back yards to provide an atmosphere where outdoor living can be enjoyed, mosquito free.

The key word is **Automatic!** The Auto Mist system is on the job 24/7, reducing insect populations.

Why use an Auto Mist system?

- ▶ The Auto Mist system eliminates irritating insects that bite.
- ▶ No time or labor invested, Auto Mist is automatic!
- ▶ The Auto Mist system provides long lasting effectiveness.
- ▶ The Auto Mist system kills the adult insects, thus breaking the breeding cycle and lowering populations.
- ▶ Some mosquitoes are capable of transmitting diseases such as malaria, dengue fever, yellow fever and the West Nile Virus.

How does the Auto Mist system work?

- ▶ Once installed, the Auto Mist system is set to spray on a predetermined 24 hour schedule. The pump draws liquid from the reservoir and transfers it through nylon tubing to spray nozzles. Auto Mist covers the area with small particles of water-based insecticide.
- ▶ Using this technology, the system controls insects by killing a large number of insects and lowering the reproduction cycle.
